

Islamic University of Science and Technology Kashmir Centre for Career Counselling and Placements

The Centre for Career Counselling and Placements is committed to bridging the gap between academic institutions and industries. The primary goal is to streamline curriculum development, ensuring it aligns seamlessly with the dynamic and job-oriented needs of the industry. This involves facilitating student training across various corporate and public sectors. Continuous interaction with the industry, achieved through guest lectures and workshops, serves to enhance students' understanding and prepare them for real-world challenges.

Given the continually evolving business landscape, there is an increasing demand for closer collaboration between universities and industries. Recognizing these changing dynamics, it becomes imperative for these traditionally separate entities to converge and create synergies. Failure to acknowledge each other's roles could lead to a misalignment between the demand and supply of skilled manpower, potentially causing disruptions in the job market. In the current era of the knowledge economy, establishing a productive interface between academia and industry is crucial for sustained success.

Hence, to further strengthen this interface, we are organizing internships in collaboration with various corporates. This initiative aims to provide students with practical exposure and hands-on experience, ensuring they are well-prepared for the demands of the professional landscape.
