### Syllabus for B.Sc. Mathematics Entrance 2022

#### SETS

Sets and their representations. Empty set, finite and infinite sets. Subsets of the set of real numbers especially intervals (with notations). Power set, Universal set and Venn diagrams. Union and Intersection of sets. Difference of sets. Complement of a set.

#### RELATIONS AND FUNCTIONS

Ordered pairs, Cartesian product of sets. Number of elements in the Cartesian product of two finite sets. Cartesian product of the reals with itself (up to  $R^3$ ).

Definition of relation, pictorial diagrams, domain, co-domain and range of relation. Types of Relations: Reflexive, symmetric, transitive and equivalence relations.

Function as a special kind of relation from one set to another. One to one and onto functions, composite functions, inverse of a function. Binary operations. Real valued function of the real variable – domain and range of these functions. Constant, identity, polynomial, rational, modulus, signum and greatest integer functions with their graphs. Sum, difference, product and quotients of functions.

#### TRIGONOMETRIC FUNCTIONS

Positive and negative angles. Measuring angles in radians and in degrees and conversion from one measure to another. Definition of trigonometric functions with the help of unit circle. Truth of the identity  $\sin^2x + \cos^2x = 1$ , for all  $x$ . Signs of trigonometric functions and sketch of their graphs. Expressing  $\sin(x+y)$  and  $\cos(x+y)$  in terms of  $\sin x$ ,  $\sin y$ ,  $\cos x$  and  $\cos y$ . Deducing the various trigonometric identities. Inverse trigonometric Functions: Definition, range, domain, principal value branches. Graphs of inverse trigonometric functions. Elementary properties of inverse trigonometric functions.

#### PRINCIPLE OF MATHEMATICAL INDUCTION

The Principle of Mathematical induction and Simple applications.

#### PERMUTATION AND COMBINATIONS

Fundamental principle of counting. Factorial  $n$ , Permutations and combinations, derivation of formulae and their connections, simple applications.

#### COMPLEX NUMBERS AND LINEAR INEQUALITIES

Need for complex numbers, especially to be motivated by inability to solve every quadratic equation. Brief description of algebraic properties of complex numbers. Argand plane and polar representation of complex numbers. Statement of fundamental theorem of Algebra, solution of quadratic equation in the complex number system.

# Department of Mathematical Sciences

Awantipora, Kashmir

---

### **LINEAR INEQUALITIES**

Algebraic solution of linear inequalities in one variable and their representation on the number line. Graphical solution of linear inequalities in two variable. Solution of system of linear inequalities in two variables- graphically.

### **LIMITS AND DERIVATIVES**

Derivative introduced as rate of change both as that of distance function and geometrically, intuitive idea of limit. Definition of derivative, relate it to slope of tangent of the curve, derivative of sum, difference, product and quotient of functions. Derivatives of polynomial and trigonometric functions.

### **STRAIGHT LINES**

Brief recall of 2D from earlier classes. Slope of a line and angle between two lines. Various forms of equations of a line, parallel to axes, point – slope form, slope – intercept form, two – point form, intercepts form and normal form. General equation of a line. Distance of a point from a line.

### **CONIC SECTIONS**

Sections of a cone: Circles, Ellipse, Parabola, Hyperbola, a point, a straight line and a pair of intersecting lines as a degenerated case of a conic section. Standard equations and simple properties of Parabola, Ellipse and hyperbola, standard equation of a circle.

### **PROBABILITY-I**

Random experiments: Outcomes, Sample spaces (set representation). Probability of an event, probability of ‘not’, ‘and’ & ‘or’ events. Multiplication theorem on probability. Conditional probability, independent events, total probability. Baye’s Theorem, Random variable and its probability distribution. Mean and variance of a random variable. Repeated independent (Bernoulli) trials and Binomial distribution.

### **BINOMIAL THEOREM**

History, Statement and proof of the binomial theorem for positive integral indices Pascal’s triangle, general and middle term in binomial expansion simple applications.

### **SEQUENCE AND SERIES**

Sequence and Series. Arithmetic Progression (A.P.), arithmetic mean (A.M). Geometric progression (G.P) general term of a G.P sum of n terms if a G.P. Geometric mean (G.M), relation between A.M. and G.M. Sum to n terms of the special series :  $\sum n$ ,  $\sum n^2$  and  $\sum n^3$ .

### **INTRODUCTION TO THREE DIMENSIONAL GEOMETRY**

Coordinates axes and coordinate planes in three dimensions. Coordinates of a point Distance between two points and section formula.

### MATHEMATICAL REASONING

Mathematically acceptable statements. Connecting words/ phrases- consolidating the understanding of “if and only if (necessary and sufficient) conditions”, “implies,” “and/or”, “Implied by,” “and,” “or”, “there exists” and their use through variety of examples related to real life and Mathematics. Validating the statements involving the connecting words – difference between contradiction, converse and contrapositive.

### ALGEBRA

Matrices: Concept, notation, order, equality, types of matrices, zero matrix, transpose of a matrix, symmetric and skew symmetric matrices. Addition, multiplication and scalar multiplication of matrices, simple properties of addition, multiplication and scalar multiplication. Non – commutativity of multiplication of matrices and existence of non - zero matrices whose product is the zero matrix (restrict to square matrices of order 2). Concept of elementary row and column operations. Invertible matrices and proof of the uniqueness of inverse, if it exists; (Here all matrices will have real entries).

Determinants: Determinant of a square matrix (up to 3 x 3 matrices) , properties of determinants, minors, cofactors and applications of determinants in finding the area of a triangle, Adjoint and inverse of a square matrix. Consistency, inconsistency and number of solutions of system of linear equations by examples, solving system of linear equations in two or three variables (having unique solution) using inverse of a matrix.

### CALCULUS

Continuity and Differentiability: Continuity and differentiability, derivative of composite functions, chain rule, derivatives of inverse trigonometric functions, derivative of implicit functions. Concept of exponential and logarithmic functions and their derivatives. Logarithmic differentiation.

Logarithmic differentiation, Derivative of functions expressed in parametric forms. Second order derivatives. Rolle’s and Lagrange’s Mean Value Theorems (without proof) and their geometric interpretations and simple applications.

Applications of Derivatives: Applications of derivatives : rate of change, increasing / decreasing functions, tangents & normals, approximation, maxima and minima (first derivative test motivated geometrically and second derivative test given as a provable tool). Simple problems (that illustrate basic principles and understanding of the subject as well as real-life situations).

Integrals: Integration as inverse process of differentiation. Integration of a variety of functions by substitution, by partial fractions and by parts, only simple integrals of the type to be evaluated.

$$\int \frac{dx}{x^2 \pm a^2}, \int \frac{dx}{\sqrt{x^2 \pm a^2}}, \int \frac{dx}{\sqrt{a^2 - x^2}}, \int \frac{dx}{ax^2 + bx + c}, \int \frac{dx}{\sqrt{ax^2 + bx + c}}$$
$$\int \frac{(px + q)}{ax^2 + bx + c} dx, \int \frac{(px + q)}{\sqrt{ax^2 + bx + c}} dx, \int \sqrt{a^2 \pm x^2} \cdot dx, \int \sqrt{x^2 - a^2} dx,$$

Definite integrals as a limit of a sum, Fundamental Theorem of Calculus (without proof), Basic properties of definite integrals and evaluation of definite integrals.

# Department of Mathematical Sciences

## Islamic University of Science & Technology

### Awantipora, Kashmir

Applications of the Integrals: Applications in finding the area under simple curves, especially lines, area of circles / parabolas/ ellipses (in standard form only), area between the two above said curves (the region should be clearly identifiable).

Differential Equations: Definition, order and degree, general and particular solutions of a differential equation. Formation of differential equation whose general solution is given. Solution of differential equations by method of separation of variables, homogeneous differential equations of first order and first degree. Solutions of linear differential equation of the type:

$$\frac{dy}{dx} + Py = Q, \text{ where } P \text{ and } Q \text{ are functions of } x.$$

### VECTORS AND THREE – DIMENSIONAL GEOMETRY

Vectors: Vectors and scalars, magnitude and direction of a vector. Direction cosines / ratios of vectors. Types of vectors (equal, unit, zero, parallel and collinear vectors), position vector of a point, negative of a vector, components of a vector, addition of vectors, multiplication of a vector by a scalar, position vector of a point dividing a line segment in a given ratio. Scalar (dot) product of vectors, projection of a vector on a line. Vector (cross) product of vectors.

Three –dimensional Geometry: Direction cosines / ratios of a line joining two points. Cartesian and vector equation of a line, coplanar and skew lines, shortest distance between two lines. Cartesian and vector equation of a plane. Angle between (i) two lines (ii) two planes (iii) a line and a plane. Distance of a point from a plane.

### LINEAR PROGRAMMING

Linear Programming: Introduction, related terminology such as constraints, objective function, optimization, different types of linear programming (L.P) problems, mathematical formulation of L.P. problems, graphical method of solution for problems in two variables, feasible and infeasible regions, feasible and infeasible solutions, optimal feasible solutions (up to three non-trivial constraints).
