

## Awards, Internships and Project funding

We have funded more than 60 projects of final year engineering/technology students with a strong underlying theme of innovation.

- Winter Innovation Award (WIN) for students to work on their innovative ideas during winter vacations, encouraging them to go beyond the traditional academic experience. Nine ideas have received the award and have been successfully completed.
- DIC also offers summer internships of 2-to-3-month duration to recent graduates in order to bridge the gap between a successful proof-of-concept prototype to a market ready product. Twenty-one internships have been offered so far.
