

Department of Computer Science & Engineering

Project Lab

The project lab was established in 2015. The project lab is meant for the quality management for research – consists of diverse functional areas: The analytical process. The technical equipment. The laboratory has furniture and utilities. The technical building equipment. Students use this lab to design, build, and test technological devices. The lab is equipped with the latest software and computer systems. The system has i7 processors with 8 Gb of minimum RAM and has installed all necessary softwares like Oracle 12c client server, Windows 2019 server, Java with Netbeans and Anaconda.

There is a constant attempt made by the department to provide state of the art resources in the lab to meet the demands of the project ideas requiring cutting edge technology. All these labs are well equipped with enough printers.
