## Introduction

*“A hidden treasure is as good as open garbage.”*

Research is the soul of higher educational institutions. It enables educators to stay current with the latest field developments and equips students with critical thinking skills, encouraging them to question, analyze and learn independently. Research encourages a culture of continuous improvement. It allows us to revisit and refine existing knowledge. It helps us advance knowledge by discovering new facts, theories and insights across various fields, including science, technology, engineering, medicine, social sciences and humanities. Research provides evidence-based solutions to global problems such as climate change, disease outbreaks, poverty, etc. It is the engine behind progress, enabling us to create solutions to complex problems and improve existing systems.

Journals are the primary vehicle of scholarly research and play a crucial role in disseminating knowledge across various academic disciplines. Journals allow researchers to share their latest findings with the global academic community across disciplines. Typically, they employ a rigorous peer-review process, wherein experts in a particular field evaluate submitted articles for their accuracy, methodology and contribution to the existing body of knowledge. This process ensures the quality and credibility of the information published in journals, helping to filter out unreliable or inaccurate research. Publishing in reputable journals is fundamental to academic recognition and career advancement for researchers. It measures their contributions to their respective fields and enhances their reputation within the academic community.

Libraries spend a good amount of their budget on subscriptions to journals. In order to make optimum use of journals subscribed to by the Rumi Library, **JTOCs** (Journal Table of Contents) alerting service has been initiated for the academic fraternity of the Islamic University of Science and Technology. This alerting service will help maximize the use of journals and accelerate research productivity at the university in the following ways:

- It will display the table of contents of the current issues of the print journals subscribed to by the library in one place.
- It will quickly update scholars, students and faculty on the latest developments and trends in their fields of interest.
- It will positively impact the usage of the journals and the research productivity of the university.

Besides JTOCs, the Rumi Library initiated Magazine-Table of Contents (MTOCs) and Book Bell Service (BBS). MTOCs will alert users about the contents published in the recent issues of the magazines subscribed to by the Rumi Library. In contrast, BBS will notify about the books purchased by the Rumi Library during the current financial year. The Rumi Library is highly determined to ensure the continuity of these services in the future for the academic upliftment of the academic community. These services will be available online on the Rumi Library Website.
