**Bharat Electronics Ltd (BEL) Team
visited IUST for developing Entrepreneurial Ecosystem and employability
Skills
On
15th July 2024**

Bharat Electronics team comprising of seven members visited Islamic University of Science & Technology and delivered sessions in various departments on employability skills and developing innovation mindset for solving societal problems. The team was coordinated by Dr Majid Koul and his team. He mentioned that now the era of robotics and AI should be part of micro and small scale industry in J&K and the students have responsibility towards identifying micro problems in the local industry so that we become part of solution. He discussed the role of knowledge, skill and attitude in the current educational pedagogy and role of experiential learning for becoming employable at the global level.

This session was a pivotal opportunity for students to bridge the gap between theoretical knowledge and real-world application, offering them a unique insight into the practical aspects of electronic engineering. The industrial experts provided students with firsthand experience of the practical knowledge to develop the employability skills so that they can start their own entrepreneurial ventures across the state. During the session students were given a comprehensive outlook of the facility BEL. The session was structured to enhance the students' innovation and creativity capabilities so that the employment generation issues can be solved. The students were engaged in interactive sessions with the BEL engineers, gaining valuable knowledge about the machinery, safety protocols, and operational efficiencies crucial to the industry. The session not only broadened the students' understanding of engineering but also underscored the department's commitment to delivering high-quality education that aligns with industry requirements and local needs. Their collective efforts made this experience both enriching and successful. More than 60 students participated in the session.
